

Testing and Commissioning

Wells Engineering provides unparalleled testing and commissioning services that promote long-term, efficient operation of electrical power equipment. No matter your power system size or age, proper equipment maintenance is essential to maximize power system reliability. Proper maintenance isn't just testing; power system owners need a good inspection, maintenance, testing, and periodic equipment rating evaluation for a true comprehensive maintenance program. Wells Engineering's knowledge base of electric power systems analysis, design, construction, and operation enables us to provide you with the development and implementation of a comprehensive maintenance program that meets NFPA 70E requirements to suit your needs both today and tomorrow.

If you have a maintenance program in place, we would greatly appreciate the opportunity to participate in your program with our testing services. If you do not, we would be glad to assist you with the development of a program that will ensure a safe and reliable system.

Contact us today at 859-282-7538 to learn more.

Testing & Commissioning Services

RELAYS

All Manufacturers	Electromechanical/Solid State
Microprocessor	End-to-End Testing
Fault Simulations	Protection System Evaluation
IEC 61850 Compliant Testing	NERC Compliant Testing

CIRCUIT BREAKERS & SWITCHES

SF6, Oil, & Vacuum Circuit Breakers	Insulation Resistance & DLRO
Time Travel Testing	Auto Circuit Reclosers

TRANSFORMERS

Power Factor & Bushing PF	Insulation resistance
Turns Ratio	Winding Resistance
Sweep Frequency Response	Oil Analysis/DGA
Exciting Current	Maintenance & Testing Contracts

ADDITIONAL SUBSTATION EQUIPMENT TESTING

Power Cable Testing	Capacitors
Station Ground Grid Testing	Station Battery Testing
Thermographic Inspection	UPS Acceptance Testing

COMMISSIONING SERVICES

Power Transformers	HV Circuit Breakers
Secondary Breakers	Switches & Reclosers
Protective Relays	Commissioning Management

***Substation Testing & Maintenance
